

# New Jersey

Strong tidal current resources and major electricity load areas make northeastern New Jersey a great location for municipal-scale tidal power. Southern New Jersey, with its many marinas and beach communities would be better suited for private and boutique-scale projects. The tidal current interpolations on this map represent the known, public data points available for coastal New Jersey and the Delaware River.

## Tidal Current (m/s)

- Electric Transmission
- High Load Areas

Source for data points: NOAA, USGS and LIPA
